Imaging Made Easier with the Imaging Worklist

The Imaging Worklist provides a centralized view of available patient imaging across participating organizations. While the camera icon provides quick access to individual images from the Radiology tab, the Imaging Worklist offers additional visibility and tools to help streamline your imaging workflow.

Why Use the Imaging Worklist?

View Image Availability

Quickly see whether a study is available to view or needs to be retrieved. A **green** status indicates the image is immediately available, while a **yellow** status allows you to select **Load** to begin retrieving the study.

Access Historical Imaging

View up to **20 years** of available patient imaging from participating organizations.

Compare Studies Side by Side

Select and compare up to four studies for the same patient, including imaging from **different participating locations**.

Find Studies Faster

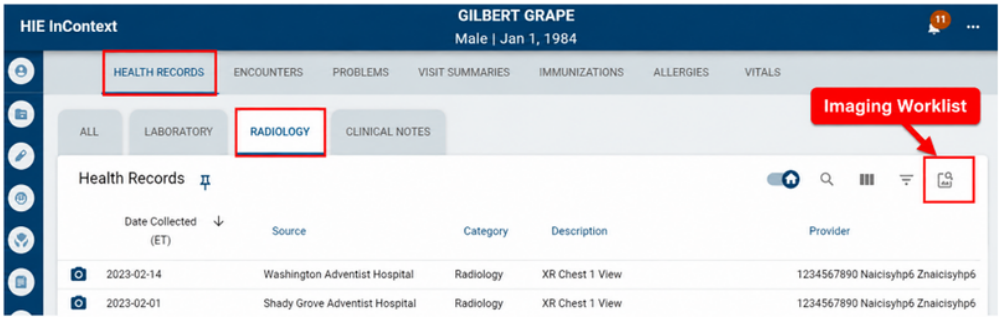
Filter available imaging by **location, study date, study description, or modality** to quickly find the studies you need.

How to Access the Imaging Worklist

From the patient record, navigate to:

1. Clinical Information
2. Health Records
3. Radiology
4. Imaging Worklist

Select the Imaging Worklist tab to view available studies and their current image availability status.



Understanding Image Retrieval Times

Some studies may take additional time to retrieve, depending on the **imaging modality** and **study size**. Use the estimated retrieval times below as a guide:

Modality	Expected Rerieval Time
CR / DX / XR	Less than 5 minutes
US / XA / NM	Approximately 5 minutes
MR / CT	5 - 15 minutes
MG / PET	10 - 20 minutes

For more information about accessing the Image Exchange tool, visit crispdc.org/image-exchange or contact the CRISP DC outreach team via email at dcoutreach@crispdc.org.
