

## CRISP DC Vaccine Tracker (ImmuTrac)

### What is ImmuTrac?

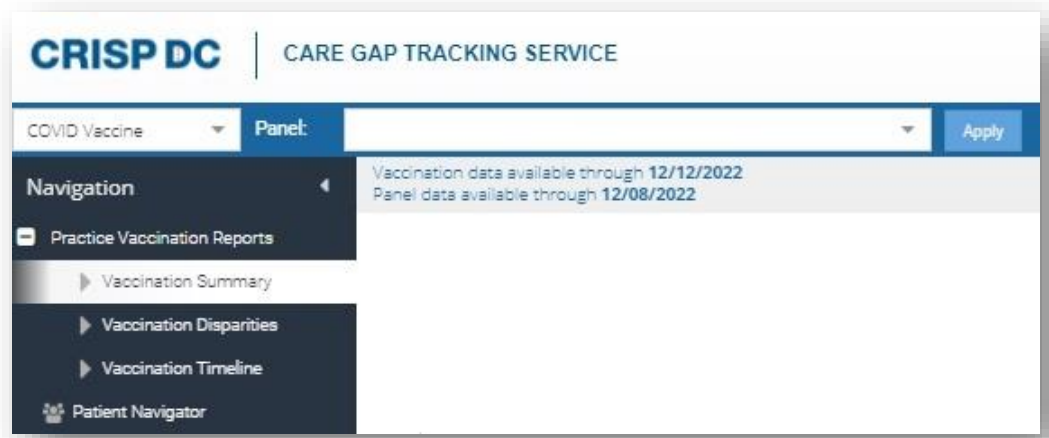

ImmuTrac is a web-based application that enables physicians and payers to track their patients' COVID-19 vaccination status and prioritize outreach to unvaccinated patients. The reports are populated using daily vaccination data from the D.C. Department of Health, practice lists for each provider's attributed population, and patient Chronic Condition flags based on administrative claims data (where available).

### What are the Available Reports?

The following tabs are available under the Care Gap Tracking Service report card.

#### Vaccination Summary:

A summary of the individuals vaccinated by demographics such as age group, gender, race, and ethnicity. This report shows the number and percentage of patients on an organization's ENS panel that have not been vaccinated, have received a single dose of a multi-dose vaccine, or have completed their vaccination schedule.

#### Vaccination Disparities:

A report that allows the user to compare across demographic groups (race, ethnicity, gender, and age) to identify potential disparities in vaccination to ensure equitable allocation of the vaccine across demographic groups.

**Vaccination Timeline:** A report that displays the number and percent of patients vaccinated over time. The orange represents those not vaccinated, the blue represents those who have received one dose, and the green represents patients who have completed their vaccination schedule. To see percentages and more information at a point in time, the user can hover over a point to view a tooltip with more details.

**Patient Navigator:** A module designed to allow the user to identify patients on their ENS panel who have not been vaccinated and track outreach efforts to those patients. It contains patient-specific demographics, vaccination, and contact information for a practice's population. Other functionalities include user-editable fields for outreach tracking and custom filters allowing users to segment their population quickly.

### How to Access:

If you would like access or have any further questions, please contact the CRISP DC Outreach Team at [dcoutreach@crisphealth.org](mailto:dcoutreach@crisphealth.org) or Linda Nguyen (CRISP DC Program Coordinator) at [linda.nguyen@crisphealth.org](mailto:linda.nguyen@crisphealth.org).

Once a user has access, they can navigate to [reports.crispdc.org](https://reports.crispdc.org) to access the ImmuTrac tool via the Care Gap Tracking Service report card.
