CRISP DC

Efficiency Redefined: Discover the Power of Image Exchange through the HIE Portal

What is Image Exchange?

Image Exchange is a service that enables users to share patient images with other healthcare organizations in high-quality diagnostic format through the HIE Web Portal or the InContext Application integrated within their EHR. This image sharing can optimize patient care by reducing wait times, radiation exposure, and unnecessary duplicate studies while improving outcomes.

Who Can Access the Images My Organization Shares?

Facilities must share radiology reports to be considered Image Exchange Participants and contribute images to the HIE. Any user with access to a patient's health record in the HIE Portal or directly through the InContext Application within their EHR can view shared images, which streamlines communication and collaboration among healthcare professionals.

Types of Users Who Find Value in Our Image Exchange Tool

Radiologists
Orthopedic Surgeons
Neurologists
Cardiologists
Emergency Room Physicians

Primary Care Physicians
Oncologists
Physical Therapists
Support Staff
And more...

How Does Image Share and Exchange Benefit You?

✓ Faster Access to Critical Imaging Data
✓ Quicker Decision-Making
✓ Enhance Patient Health Outcomes
✓ Reduce Duplication of Imaging Studies
✓ Limit Patient Exposure to Radiation

✓ Increase Efficiency of Provider Collaboration
✓ Improve Workflow through Integration
✓ Centralized Platform for Sharing and Accessing Medical Images
