

Image Exchange: A Powerful Resource for Behavioral Health Providers

The CRISP DC Image Exchange provides behavioral health providers instant, secure access to imaging performed across partner healthcare organizations, delivering real-time clinical insights for patients with complex medical, neurological, or substance use needs, as well as those recently seen in emergency or inpatient settings.

Key benefits:

- **Holistic View of Patient Health** – Gain a fuller understanding of your patient population's health by viewing recent and past imaging (e.g., MRIs, CT scans) related to neurological and other physiological conditions.
- **Enhance Coordination Across Care Teams** – Support integrated care by facilitating communication with other healthcare professionals, ensuring continuity of care, and reducing the need for duplicative imaging.
- **Time-Saving and Streamlined Workflows** – Access a centralized imaging worklist that helps providers filter images by study date, description, and modality, reducing time spent searching for critical patient information.
- **Support Safer Care Transitions** – Review imaging from recent emergency department visits or inpatient stays to inform intake assessments, follow-ups, and crisis stabilization planning.

Potential Use Cases:

- Assessing neurological imaging alongside behavioral assessments to **rule out physical causes of cognitive or behavioral symptoms**.
- **Collaborating on shared patients** between primary care and neurology teams.
- Using imaging insights to **support treatment planning and continuity of care** for patients.

Increase Your Utilization of the Image Exchange & Imaging Worklist Tools Today!

Access directly through your EHR/EMR InContext Application or via the web portal at portal.crispdc.org.
