

## Use Case:

DC CRS Social Needs Z-Codes

## Overview:

In 2023, DHCF, CRISP DC, and hMetrix will be building a suite of social needs population health-based analytics in DC CRISP Reporting Services (CRS) for hospitals, payors, and FQHCs. While there are no defined use cases for reporting yet, CRISP DC seeks committee feedback on the use of social needs ICD-10 codes (z-codes) from ADTs and CCDs for reporting. CRISP DC currently collects z-code data from 5 FQHCs and 12 other DC sources, including hospitals.

As of January 2023, CRISP has:

- 47,906 z-codes available from ADTs
- 8,667 z-codes available from CCDs
- 41,443 Medicaid beneficiaries with z-codes available in the HIE

CRISP DC believes z-codes can enhance existing or future population-health analytics in DC CRS but wants to ensure data owners support use of this information beyond Portal display.

## Requesting Stakeholder:

CRISP DC

## Source(s) of Data:

- ADTs (Admission, Discharge, Transfer messages)
- CCDs (Continuity of Care Documents)
- Data collected from 5 FQHCs and 12 other DC sources, including hospitals

## Display Method and Location:

Data currently displayed in the CRISP DC Portal; potential use in DC CRS population health-based analytics reports.
