

My Patient Summary

My Patient Summary is designed to save users time locating regularly viewed patient data within InContext. This feature enables users to customize a unique tab and/or landing page containing self-selected priority data views, so that users can quickly access the data most important to them without the hassle of excess clicks and toggling through different data tabs.

This editable dashboard focuses on giving users control from start to finish - it's a space built for their needs and their needs only. Users can configure their unique view by pinning up to 8 tabs, eliminating repetitive time spent clicking through InContext looking for the data they commonly need.

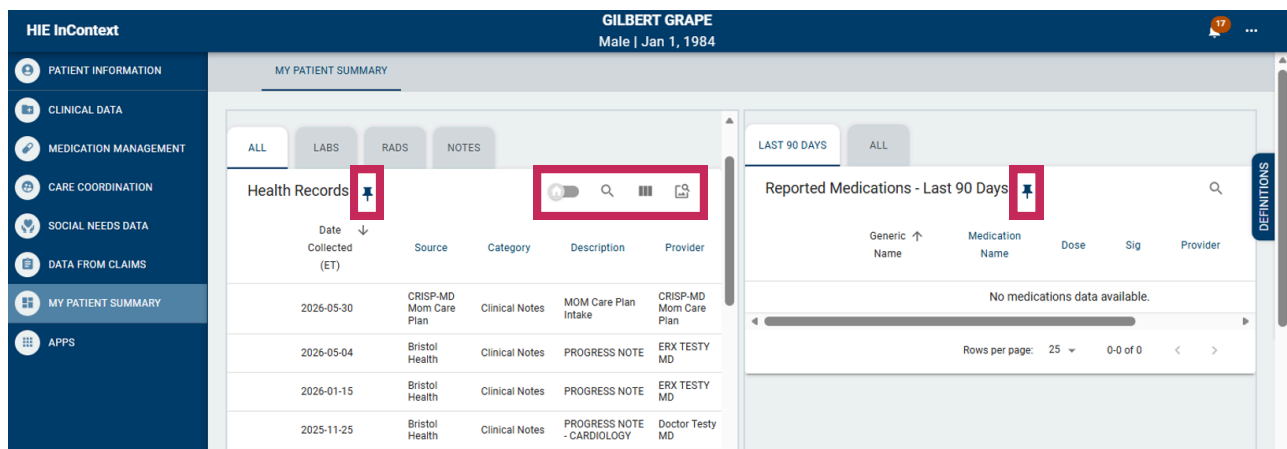

How to Access

Available through both the web-based portal and EHR application, My Patient Summary can be found on the left side panel of InContext.

Customizations:

Pinning and Un-pinning Tabs, Re-Ordering Pinned Tabs/Subtab and Advanced Search and Filtering.
